Flutter

58

- **Version:**

```
flutter --version
```

- **SDK location:**

```
where flutter
```

- **Detailed information:**

```
flutter doctor -v
```

- **Upgrade**

```
flutter upgrade
```

- **Change channel** to, say `beta`

```
flutter channel beta  
flutter upgrade
```

Dart

- **Version:**

```
dart --version
```

- **SDK location:**

where dart

"where dart" doesn't work for me. Getting "bash: where: command not found " – [Krishna Shetty](#) Dec 29, 2021 at 7:29

Very old, but under bash i believe it is `which dart` @KrishnaShetty – [Elias Yishak](#) Jan 30 at 18:53

As others have said use

19

`flutter doctor`

or

`flutter --version`

If that is not working you need to make sure that the `flutter/bin` directory is in your path:

```
echo $PATH
```

If it isn't see [this link](#) to add it.

Flutter

5

Open the terminal, simply write

```
flutter --version
```

To see full overview and related other necessary things

```
flutter doctor
```

To see the installation path

```
echo $PATH
```

Dart

To see the dart language version

```
dart --version
```

Simply navigate to flutter sdk folder and open the file `version`

5

```
flutter/version
```

If you want to check your flutter version:

3

`flutter --version`

If you want to upgrade the flutter version:

`flutter upgrade`[Share](#) [Follow](#)
